Measuring open data impact in Europe

- 30 September 2022
- 10.00 – 11.30 CET

Rules of the game

Our agenda for today

1

**Introduction to
measuring open
data impact**

2

**Countries' experiences:
Poland and France**

3

Panel discussion

4

**Q&A and
feedback**

Our agenda for today

1

**Introduction to
measuring open
data impact**

2

3

4

Why measuring impact of open data?

- Measuring impact provides an understanding of both the positive and negative **effects** of an intervention, in a single or in multiple domains.
- According to the **European Commission's Better Regulation Guidelines**:

*'impact assessment promotes informed decision-making and contributes to **better regulation** that delivers the full benefits of policies at minimum cost, while upholding the principles of subsidiarity and proportionality'*

- Effectiveness of open data portals
- Usefulness of datasets
- Externalities ...

Open Data Directive
&
Implementing Act on High Value datasets

How is impact of open data defined?

- A consistent definition does not exist, but 'impact' is positively connoted.
- The existing open data frameworks most frequently referred to are the **Open Data Maturity (ODM)** and the **Open Data Barometer (ODB)**.

ODM

- Published yearly by data.europa.eu
- 30+ European countries involved
- Focus on open data maturity level along four dimensions: policy, impact, portal, quality

ODB

- Published yearly (2018) by the World Wide Web and the Omidyar Network
- 30 world countries involved
- Focus on accountability (political), innovation (economic), and social impact

2022 ODM has an updated impact methodology

Policy

- Policy framework
- Governance
- Implementation

Portal

- Portal features
- Portal usage
- Data provision
- Portal sustainability

Impact

- Strategic awareness
- Measuring re-use
- Creating impact
 - Governmental impact
 - Social impact
 - Environmental impact
 - Economic impact

Quality

- Currency and completeness
- Monitoring and measures
- DCAT-AP compliance
- Deployment quality and linked data

A re-structured impact dimension to better distinguish re-use and impact creation

'Measuring re-use' explores the ways in which countries analyse re-use

2. Measuring re-use

- | | |
|-----|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 2.1 | <ul style="list-style-type: none">▪ Activities are in place to understand which and how datasets are re-used, for example:<ul style="list-style-type: none">- Log files are analysed to collect and investigate how datasets are being used.- Automated feedback mechanisms are in place to track users' access to datasets.- Surveys/other extensive research tools are used to measure the re-use of open data. |
| 2.2 | <ul style="list-style-type: none">▪ Activities are in place to better understand re-users' needs, for example:<ul style="list-style-type: none">- Feedback sessions with portal users are regularly conducted.- Social media sentiment analysis is used. |
| 2.3 | <ul style="list-style-type: none">▪ A process is in place to systematically gather re-use cases.▪ Re-use cases are classified according to categories (e.g., environmental, social, economic re-use cases etc.) |

Do you track which datasets are used? Through which method?

Do you know who the re-users of your datasets are and what do they need? How did you find out?

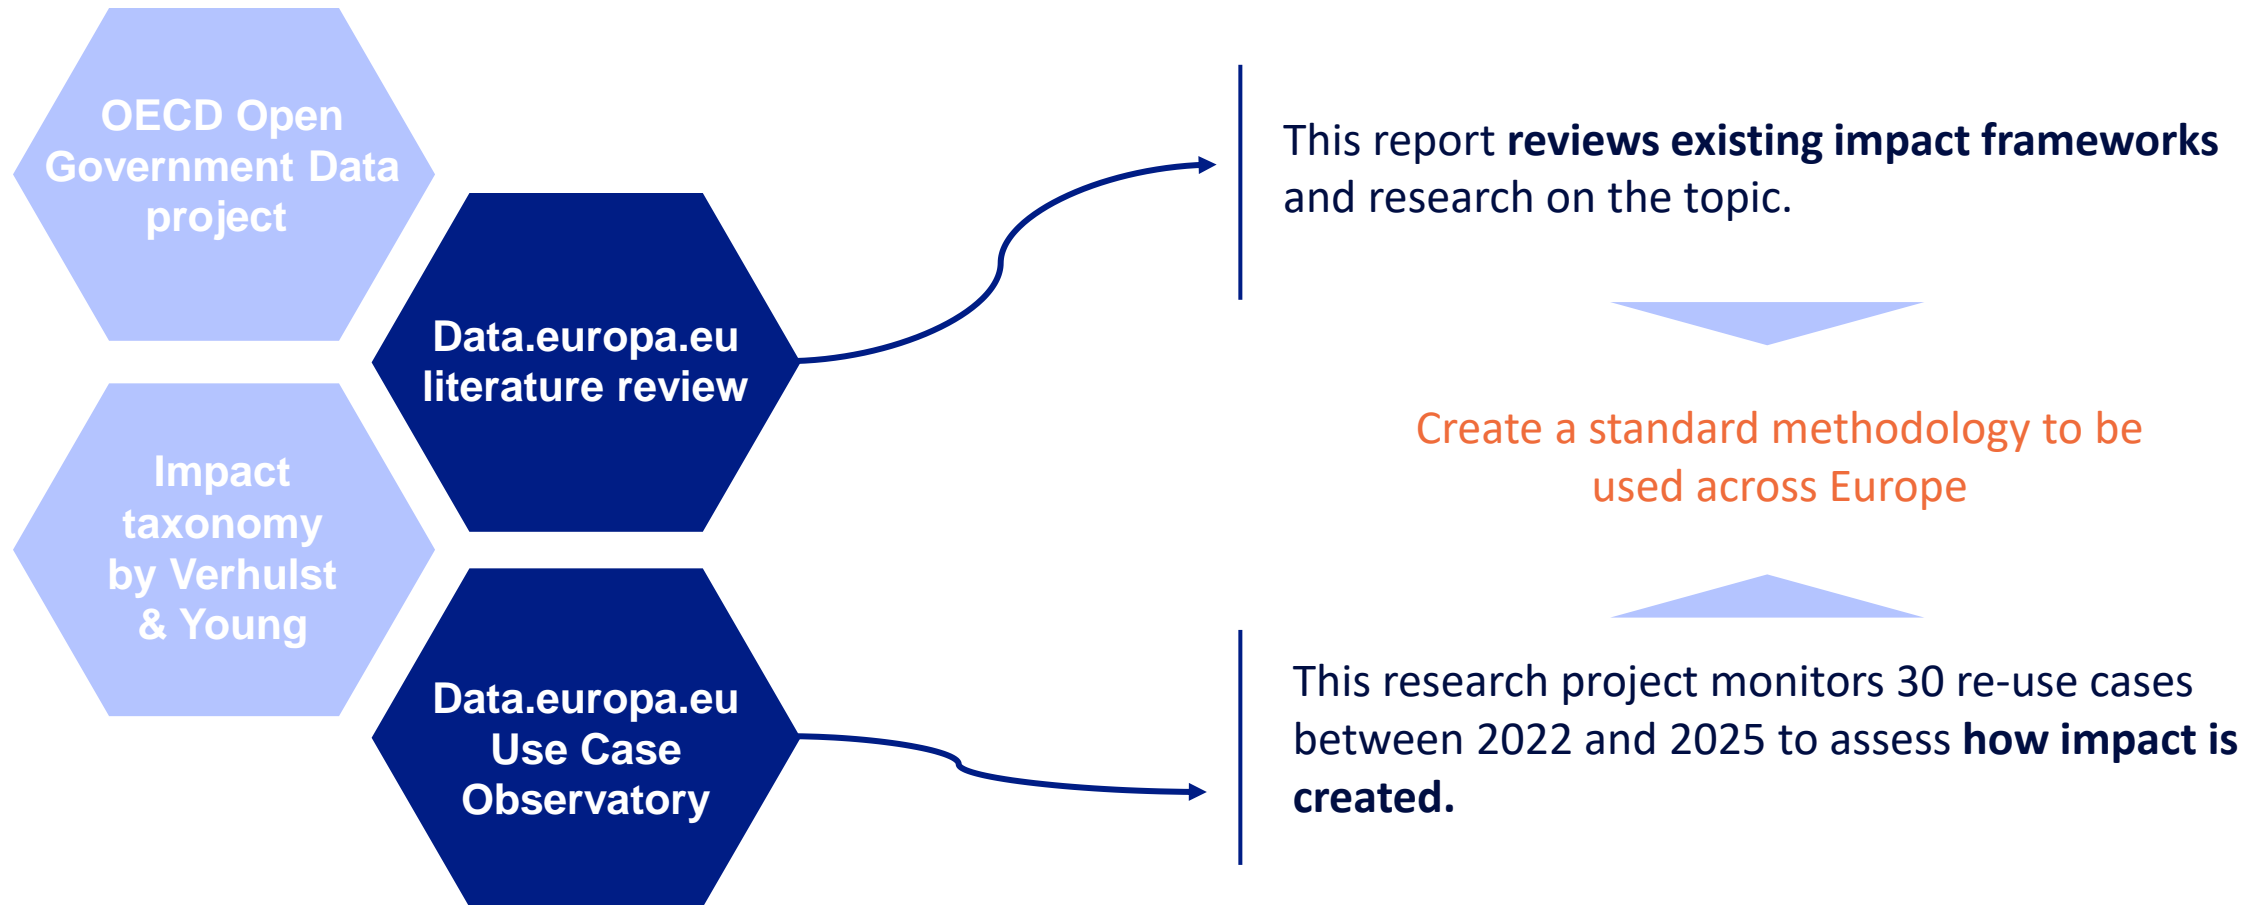

Do you have a systematic collection of re-uses, e.g., ordered by impact category?

'Created impact' looks at how impact from re-use is measured

3. Created impact	
3.1	<ul style="list-style-type: none">▪ Data on the impact created by open data on governmental challenges is available in your country▪ Various re-use examples exist that showcase the impact of open data on:<ul style="list-style-type: none">- Increasing government efficiency and effectiveness in delivering public services,- Increasing transparency and accountability of public administrations,- Enabling better policy- and decision-making.
3.2	<ul style="list-style-type: none">▪ Data on the impact created by open data on societal challenges is available in your country.▪ Various re-use examples exist that showcase the impact of open data on:<ul style="list-style-type: none">- Better including marginalized groups and reducing inequality,- Increasing awareness on housing issues,- Raising awareness on health- and wellbeing-related issues,- Raising awareness on education issues.
3.3	<ul style="list-style-type: none">▪ Data on the impact created by open data on environmental challenges is available in your country.▪ Various re-use examples exist that showcase the impact of open data on:<ul style="list-style-type: none">- Increasing awareness on biodiversity-related topics (e.g., air and water quality),- Enabling more environmental-friendly cities,- Raising awareness on climate change and connected disasters,- Encouraging a lower consumption of energy based on fuel and the switch to renewables.
3.4	<ul style="list-style-type: none">▪ Data on the impact created by open data on the economy is available in your country.▪ Various re-use examples exist that showcase the impact of open data on the following indicators of economic growth:<ul style="list-style-type: none">- Employment,- Technology and innovation,- Entrepreneurship and business creation.

- *Have you measured the impact of open data re-use?*
- *Instead of merely providing re-use cases, can you explain how this impact is created?*
- *How did open data in your country contribute to cope with specific governmental, societal, environmental, and economic challenges of our time?*

Towards a standard impact methodology

MEASURING OPEN DATA IMPACT – A PRACTITIONER'S PERSPECTIVE

some brief and practical remarks on how to
define and assess open data impact on
economy and society

Joanna Malczewska, Counselor, Data Management Department,
Chancellery of the Prime Minister of Poland

joanna.malczewska@mc.gov.pl

1.

**From a single survey
to objective impact assessment criteria**

Open data re-use among entrepreneurs

level of interest in accessing
open data

open data as development
opportunity for companies

03 identifying market trends in
open data

04 identifying business sectors
that are to gain the most from
open data

2.

What have we done and what is ahead of us

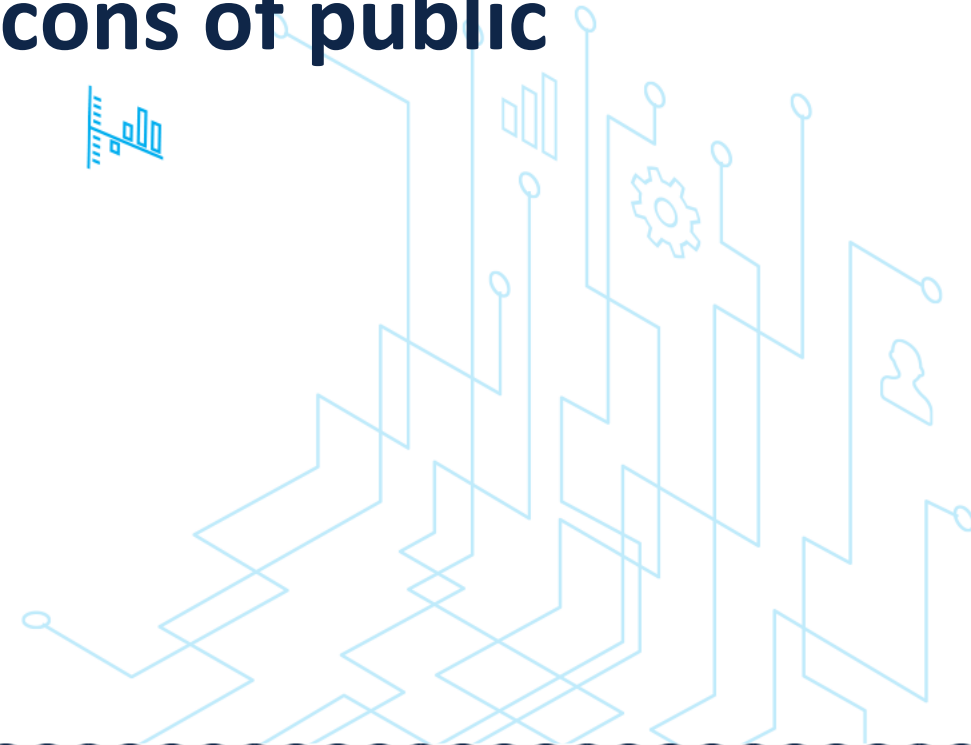

The surveys and reports

- 01** Smart farming
751 farmers and agricultural enterprises were surveyed – we assessed the level of interest in access to applications and services based on open data, how they are used in agro business and whether - and to what extent – they are perceived as important factor for the growth and development opportunities for the firms
 - 02** Local government
in progress – designing the research tool and deciding on the selection of respondents
 - 03** NGOs
in planning
- 

3.

To commission or not to commission?

What we found out about pros and cons of public procurement

OPEN DATA

Act
of August 11 2021
on the open data and re-use
of public sector information

AIM

- increasing supply and better quality of data
- open data ecosystem
- join to the leaders in Europe

Open Public Data Programme
for 2016-2020

Directive

of the European Parliament
and of the Council of 20 June 2019 on open data
and the re-use of public sector information

Calendar
of data opening

Network
of open data officers

Open Data Academy

Customised training courses
for public administration

WEBINAR

Stories from the Use Case Observatory – Volume I

7 October 2022
10.00 – 11.30 CET

The poster features a dark blue background with a red top-left corner containing the 'data.europa academy' logo. A white box with the word 'WEBINAR' in red is positioned above the title. The title itself is in large white font. At the bottom, a white icon of a person at a computer is followed by the date and time in white text. A yellow arrow icon points to the right, and a red arrow icon points to the bottom right.
