

WEBINAR

Smart cities and digital twin technology: the case of Dublin

data.
europa
academy

14 March 2025

10:00 – 11:00 CET

Rules of the game

The webinar will be recorded and published on the data.europa academy

For questions, please use the ClickMeeting chat

Please reserve 3 min after the webinar to help us improve by filling in our feedback form

Agenda

10.00 – 10.05

Opening and introduction – *Flora Kopelou*

10.05 – 10.45

Smart Dublin: Deep-dive into Dublin's digital twin – *Mani Dhingra, Evan Smyth*

10:45 – 11:00

Q&A session & closing remarks – *Flora Kopelou*

Introduction

Flora Kopelou
data.europa.eu,
Publications Office of the EU

Mani Dhingra
Smart City Digital Twin
Manager,
Dublin City Council

Evan Smyth
Chief Software Architect,
Irish Centre for High-End
Computing (ICHEC)

SMART CITIES & DIGITAL TWIN TECHNOLOGY

THE CASE OF DUBLIN

Presented by

Dr. Mani Dhingra (She/Her)

Digital Twin Programme Lead

Smart Cities, Dublin City Council

E: mani.dhingra@dublincity.ie

Comhairle Cathrach
Bhaile Átha Cliath
Dublin City Council

Overview

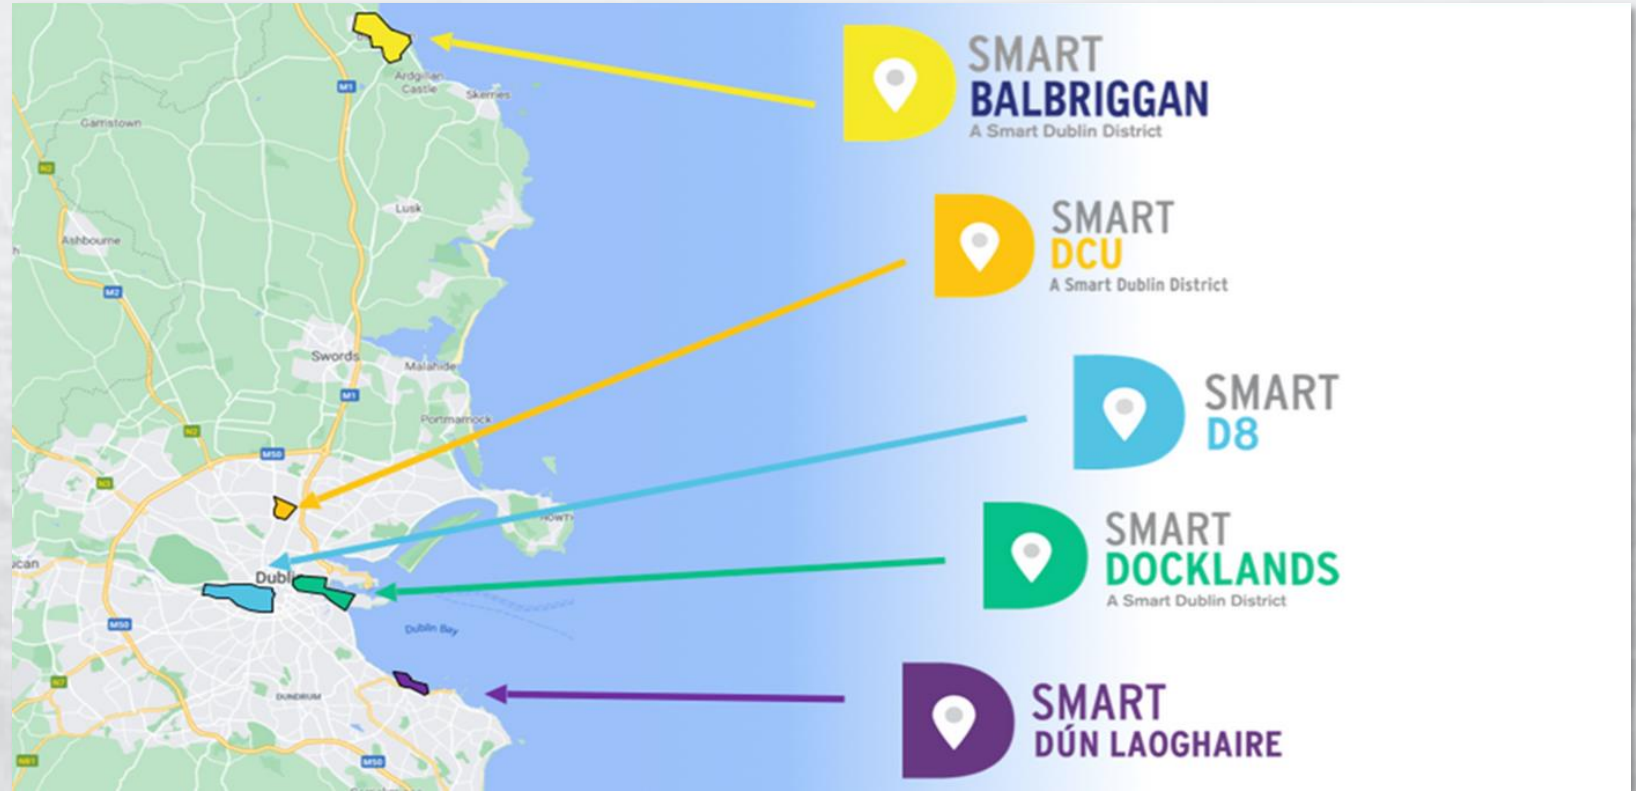

- **Smart City unit at Dublin City Council**
- **Timeline of Digital Twin Programme**
- **Open 3D models supporting Innovation**
- **Proof of Concepts and examples**
- **Challenges and Opportunities**

Overview

- **Smart City unit at Dublin City Council**
- **Timeline of Digital Twin Programme**
- **Open 3D models supporting Innovation**
- **Proof of Concepts and examples**
- **Challenges and Opportunities**

- **Rethinking our Approach**
- **Building Local Stakeholder Network**
- **Transnational EU project Twin4Resilience**
- **Digital Twin for Engagement – ICHEC project**
- **Collective Effort to Dublin Digital Twins**

An initiative of the **FOUR DUBLIN LOCAL AUTHORITIES** to engage with technology providers, researchers and citizens for solving local urban challenges by leveraging smart districts programme.

DUBLIN CITY COUNCIL

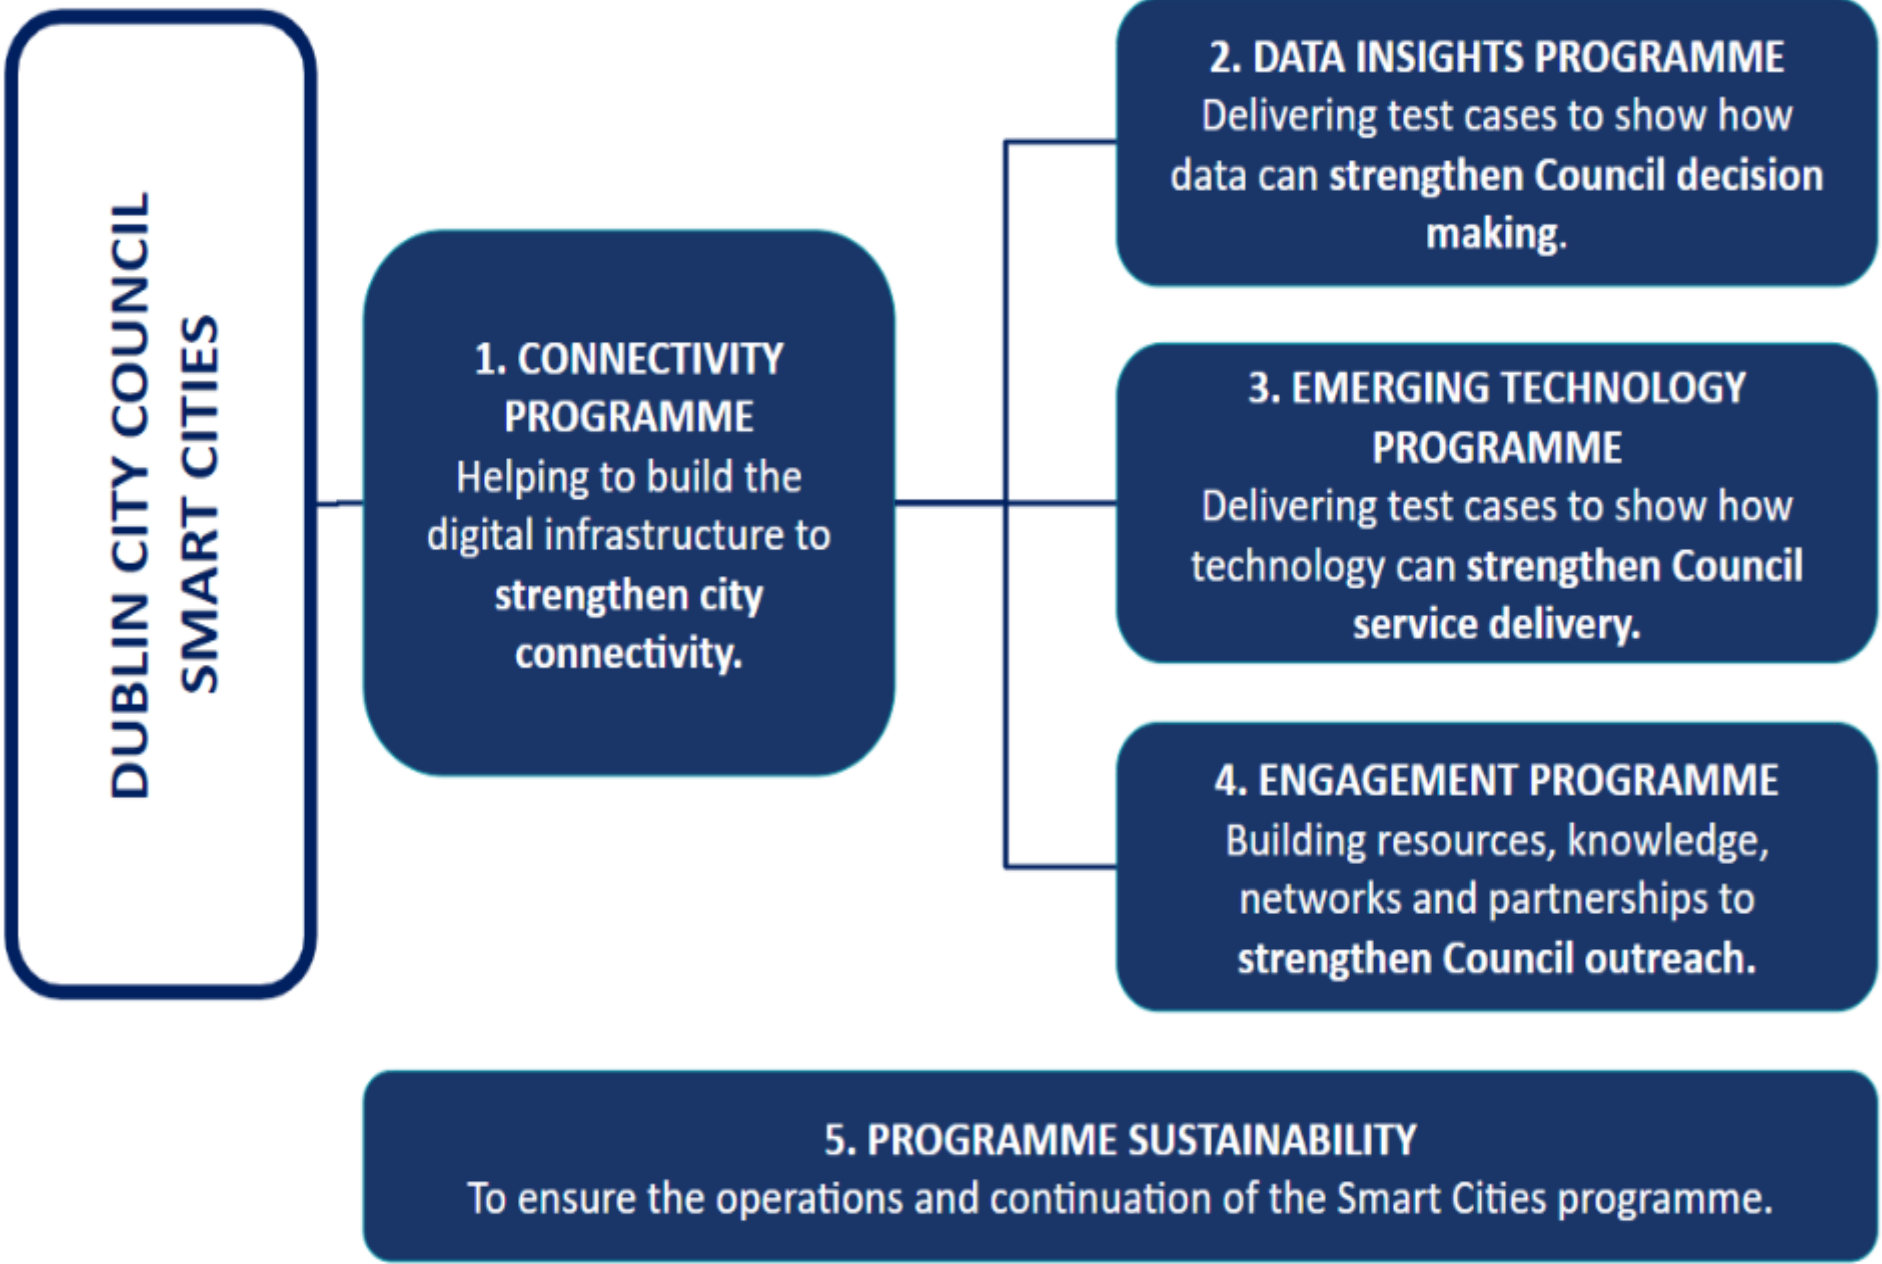

Vision:

Make Dublin a Dynamic and Sustainable City

6 PRINCIPLES

- Commitment to excellent Public service
- Sustainability
- Leadership
- Ambition
- Fairness
- Accountability

**Corporate Services and
Transformation Department**

3. EMERGING TECHNOLOGY PROGRAMME

Delivering test cases to show how
technology can strengthen Council
service delivery.

Comhairle Cathrach Bhaile Átha Cliath
Dublin City Council

The cover of a report titled 'Establishing a Telecoms Unit for Dublin'. It features a photograph of a cityscape at night with lights reflecting on water.

DUBLIN'S TIMELINE

from 3D modeling to Digital Twins

2018
3D model of Docklands area procured

2019
3D Hackathon using open 3D model

2020 – 2021
Data Capture
Drone surveys and mapping of selected Dublin areas

2021-2022
Proof of Concepts:

- *Smart DCU*
- *Dublin Fire Brigade*
- *Docklands Twin*

2023
Smart City Digital Twin Programme
Explore internal engagement use cases - 3D visualization and geo-animations for public engagement

2025
DCC Digital Twin Strategic Roadmap

- BIM Strategy
- GIS Strategy
- Common Data Environment
- Multistakeholder collaboration

2024
Digital Twin Projects

- Twin4Resilience
- Data Insights for Active Travel
- ICHEC DIF project

Smart DCU

Dublin Fire Brigade

An aerial photograph of a city with a river and a bridge, overlaid with a central graphic. The graphic consists of a large green circle with a blue border, containing the text "CHALLENGES & OPPORTUNITIES". Four smaller circles are connected to the central circle by lines: a light blue circle with a bar chart icon (top-left), a dark blue circle with a server rack icon (top-right), a dark blue circle with a person icon (bottom-right), and a light blue circle with a square icon (bottom-left).

'RETHINKING'....

GOVERNANCE

ENGAGEMENT

'RETHINKING'....

GOVERNANCE

ENGAGEMENT

1 DATA GOVERNANCE

- Identify good quality available data for developing DT model.
- Understand data and their format requirements.
- Saving, storing and dealing with large and heavy datasets underpinning these models.
- Keeping data up-to-date.
- Ownership, hosting and sharing of data.
- Making data available for different users while ensuring interoperability.
- Check how other cities are doing it.

2 INTEGRATION PLATFORM

- Integrate historical data, layer-wise information, and real-time sensor data to base model.
- Develop an accessible (web/app-based user interface on PC/laptop, mobile phone), open-source, and interactive digital twin model.
- Use of data analytics and AI to generate insights/scenarios for decision-making.
- Access data internally by various city departments, understanding where DT can be hosted, its security and cyber concerns, and how to scale solutions.

3 USE CASES

- Identify potential use cases and thematic challenges for trial and test initial digital twin framework
- Identify best visualization tools for a higher level of engagement with communities and stakeholders.
- Evaluate outcomes of use cases and revise digital twin framework.
- Trial and test immersive technologies such as VR/AR.
- Assess impact of using different models of engagement with community and stakeholders.

4 DIGITAL RIGHTS

- Identify ethical challenges and concerns in using digital twin technologies.
- Develop general framework of digital ethics and align with digital rights framework and practices at DCC.
- Mitigate digital rights and ethical issues using a data governance framework.

DCC Engagement Strategy:

- Digital Twin Advisory Group
- DCC Steering Group
- Smart City Digital Twin Team

Transnational European Cooperation Twin4Resilience (T4R) project 2024 to 2027

Joint Implementation

Resilient Pilot Actions

Resilient People

- Improve understanding and capacity:** Providing civil servants, planning companies, and citizens with comprehensive knowledge about the benefits and limitations of using LDTs.
- Support inclusive deployment:** Making sure that LDTs are integrated democratically, affordably, and sustainably into decision-making processes across various public authorities.
- Close the gap:** Bridging the divide between cities already using LDTs, those considering them, and those unaware of their potential.

Resilient Pilot Actions

Docklands 4D Planning

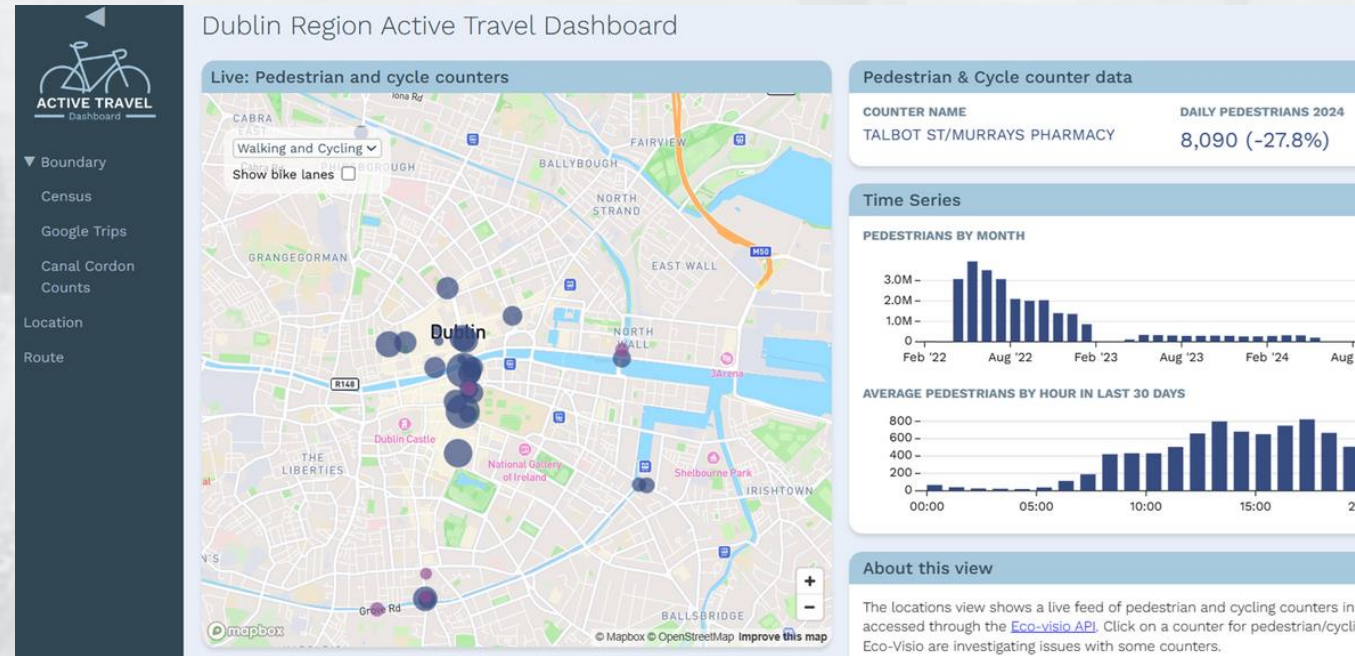

Integrating historical data, real-time developments and future proposals into an updated 3D model to serve as an essential resource for decision makers, urban planners, developers and businesses.

Resilient Pilot Actions

Docklands 4D Planning

Integrating historical data, real-time developments and future proposals into an updated 3D model to serve as an essential resource for decision makers, urban planners, developers and businesses.

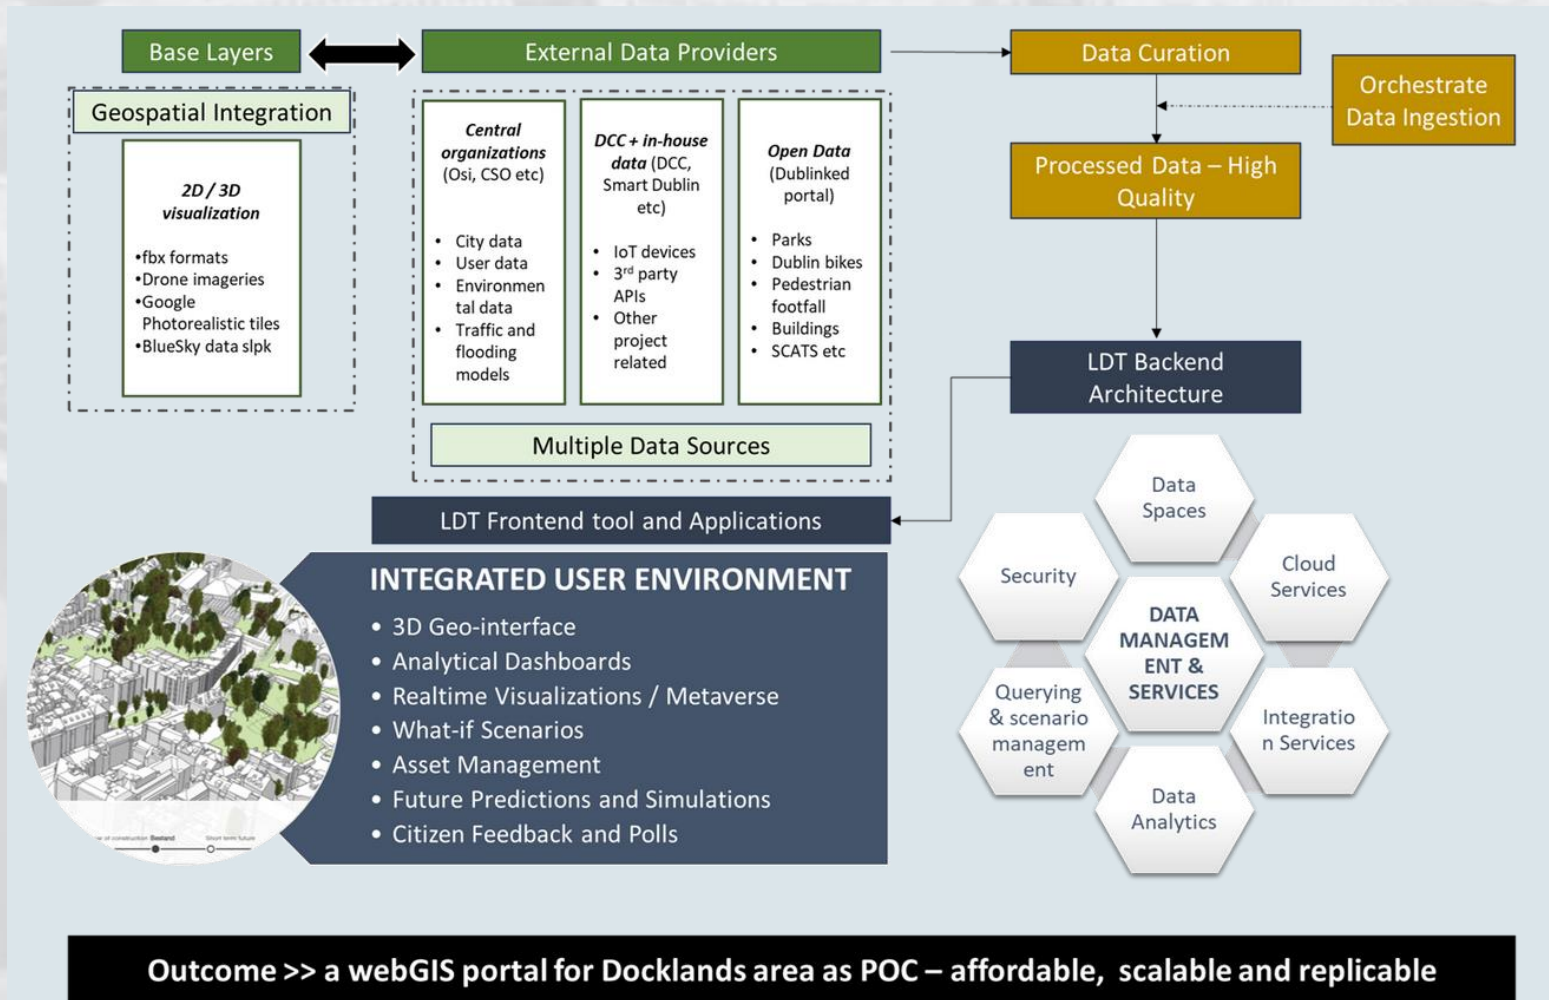

Active Travel Data Insights

Creating an Active Travel Digital Twin to assess impact of new cycling and walking routes for pre and post construction phases along with other environmental and health indicators.

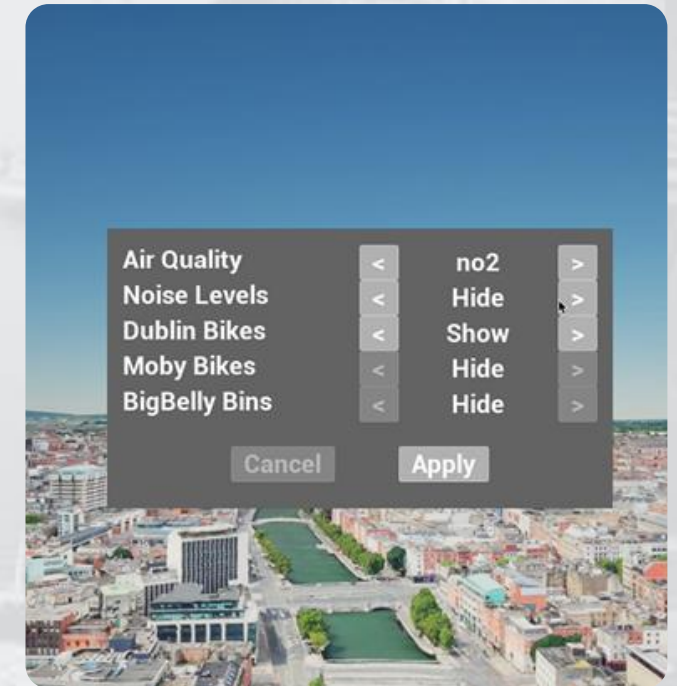

Digital Twin for Engagement (DT4E)

- Partnership with Irish Centre for High End Computing (ICHEC) under Digital Innovation Flagship call 2023
- DT4E intends to explore use-cases to innovate, trial and test digital twin solutions for better public engagement.

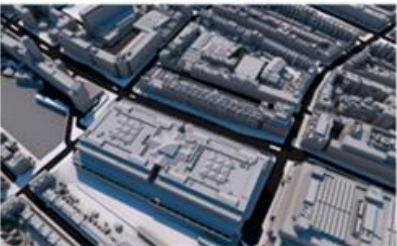

Digital Twin for Engagement (DT4E)

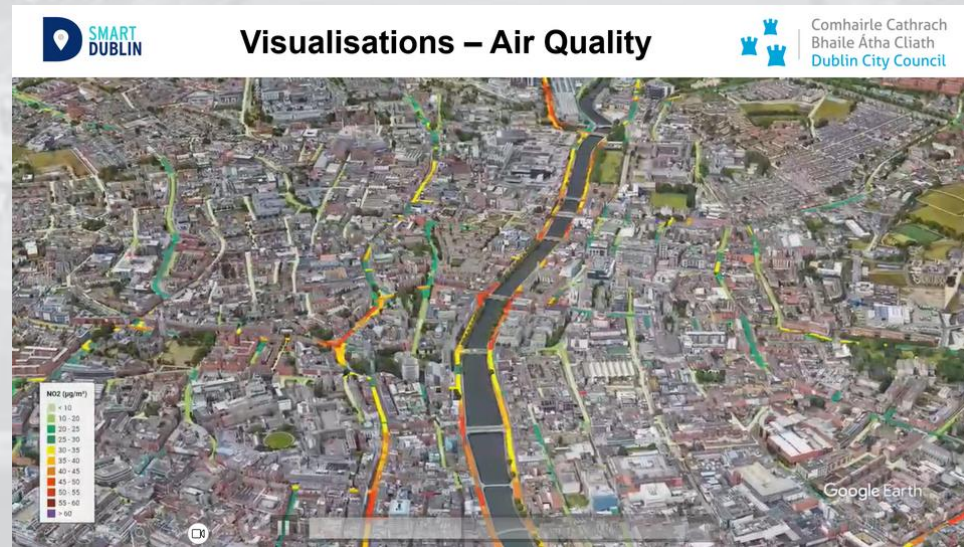

- Partnership with Irish Centre for High End Computing (ICHEC) under Digital Innovation Flagship call 2023
- DT4E intends to explore use-cases to innovate, trial and test digital twin solutions for better public engagement.

Our Challenges

- Lack of city scale 3D model
- Data quality and availability
- Online interoperable platform
- In-house technical skills

Levels of Detail (LOD)	Description	Pros, Cons, Use cases	Engagement Level				
			Inform	Consult	Involve	Collaborate	Empower
LOD 1 - 2: Prosmatic models		Pros	Lightweight and computationally efficient.				
		Cons	Users might get lost in the twin because no enough spatial details; the lack of accuracy may not satisfy in-depth analysis.				
		Use cases	General planning; basic-level public engagement; base layer for visualization; initial project assessments; basic simulation; early stakeholder engagement.				
LOD 3: Complex polyhedral models		Pros	Detailed representation allows for more accurate analysis. Balances realism and computational efficiency.				
		Cons	Increased computational requirements				
		Use cases	Advanced urban analysis; lower-level public engagement; detailed simulations; stakeholder engagement.				
LOD 4: Photorealistic textured models		Pros	Highly realistic representation for immersive experiences.				
		Cons	High computational demands may limit accessibility.				
		Use cases	Detailed simulations; high-level public engagement; marketing; decision-maker presentations.				

Resolving issue of city scale 3D model

DT4E - Smart City Digital Twin for Engagement

** EuroCC2 Digital Innovation Flagship 2023*

- *Co-develop EU-compliant digital twin platform for Dublin City Council*
- *Integrate diverse data sources into a geospatial interface*
- *Evidence-based decision-making*
- *Improved communication with citizens*

Partners: *Dublin City Council (DCC), ADAPT (SFI Research Centre)*

* The EuroHPC National Competence Centre (EuroCC) in Ireland run by ICHEC provides high-performance computing and data platforms, technologies and expert support to academic researchers, enterprises and public sector organisations. Under EuroCC, the Digital Innovation Flagship (DIF) Programme implements a number of lighthouse projects with complex computational workflow and data-centric focus.

What Did We Learn?

What Did We Learn?

- Procedural data integration challenges

What Did We Learn?

- Procedural data integration challenges
 - Cesium/Google Tiles provide Latitude/Longitude positional tools which are quite general and useful

What Did We Learn?

- Procedural data integration challenges
 - Cesium/Google Tiles provide Latitude/Longitude positional tools which are quite general and useful
 - Modern APIs (Dublin Bikes, Sonitus etc.) express locations in these terms as well

What Did We Learn?

- Procedural data integration challenges
 - Cesium/Google Tiles provide Latitude/Longitude positional tools which are quite general and useful
 - Modern APIs (Dublin Bikes, Sonitus etc.) express locations in these terms as well
 - Plan/drawing/CAD/image data often created in isolation

What Did We Learn?

- Procedural data integration challenges
 - Cesium/Google Tiles provide Latitude/Longitude positional tools which are quite general and useful
 - Modern APIs (Dublin Bikes, Sonitus etc.) express locations in these terms as well
 - Plan/drawing/CAD/image data often created in isolation
 - Metadata

What Did We Learn?

- Procedural data integration challenges
 - Cesium/Google Tiles provide Latitude/Longitude positional tools which are quite general and useful
 - Modern APIs (Dublin Bikes, Sonitus etc.) express locations in these terms as well
 - Plan/drawing/CAD/image data often created in isolation
 - Metadata
 - Legacy and ad hoc data needs to be augmented with Lat/Long information for accurate visual placement

What Did We Learn?

- Procedural data integration challenges
 - Cesium/Google Tiles provide Latitude/Longitude positional tools which are quite general and useful
 - Modern APIs (Dublin Bikes, Sonitus etc.) express locations in these terms as well
 - Plan/drawing/CAD/image data often created in isolation
 - Metadata
 - Legacy and ad hoc data needs to be augmented with Lat/Long information for accurate visual placement
 - At a minimum, we require two (2) locations in the data with world-space Lat/Long information: An origin and another position in, say, a point a known distance in a due northerly direction
 - 3d coordinates in CAD
 - 2d locations/pixels in drawings/plans

What Did We Learn?

- Procedural data integration challenges
 - Cesium/Google Tiles provide Latitude/Longitude positional tools which are quite general and useful
 - Modern APIs (Dublin Bikes, Sonitus etc.) express locations in these terms as well
 - Plan/drawing/CAD/image data often created in isolation
 - Metadata
 - Legacy and ad hoc data needs to be augmented with Lat/Long information for accurate visual placement
 - At a minimum, we require two (2) locations in the data with world-space Lat/Long information: An origin and another position in, say, a point a known distance in a due northerly direction
 - 3d coordinates in CAD
 - 2d locations/pixels in drawings/plans
 - This will allow any two annotated data sources to be correctly placed relative to each other in a presentation

What Did We Learn?

- Procedural data integration challenges
 - Cesium/Google Tiles provide Latitude/Longitude positional tools which are quite general and useful
 - Modern APIs (Dublin Bikes, Sonitus etc.) express locations in these terms as well
 - Plan/drawing/CAD/image data often created in isolation
 - Metadata
 - Legacy and ad hoc data needs to be augmented with Lat/Long information for accurate visual placement
 - At a minimum, we require two (2) locations in the data with world-space Lat/Long information: An origin and another position in, say, a point a known distance in a due northerly direction
 - 3d coordinates in CAD
 - 2d locations/pixels in drawings/plans
 - This will allow any two annotated data sources to be correctly placed relative to each other in a presentation
 - Central metadata search and access-point discovery systems would be very useful

2025 activities!

The logo for Data Europa Academy is located in the bottom-left corner. It features a large red circle that partially overlaps a smaller dark blue circle. Inside the dark blue circle, the text "data.europa academy" is written in white, lowercase letters. The word "data" is on the top line, "europa" is on the middle line, and "academy" is on the bottom line. The "e" in "europa" has a small yellow dot above it. To the right of the dark blue circle, there is a white circle that overlaps the red circle.

Exploring the Evolution of Smart Cities Through Open Data

With a commitment to sustainable and greener urban development, European cities are embracing smart city initiatives. These initiatives aim to make urban areas more efficient, environmentalall...

Theme: Impact

Target audience: Civil servants

The preview includes a map of Europe with green dots representing charging stations. Below the map is a bar chart titled 'new stations' showing an upward trend from 2009 to 2024. A callout box indicates '1150 charging stations'.

Continue the discussion on our Collaboration Channel!

Collaboration channel

Connect with a vibrant community of data enthusiasts!

This space is designed for users to share ideas and exchange challenges and opportunities in the scope of the constantly evolving data landscape. You can join the group and topic you prefer, follow and be updated on ongoing conversations and participate in discussions on topics that matter to you.

Whether you are a data provider or a data reuser, you will find a dedicated space for collaboration where you can foster meaningful discussions.

If you are an official data provider, you can request access to this restricted forum, and we will carefully analyse your request. If you are a data reuser, you can join and will have direct access to this community to connect and engage with other members.

Data reusers

Data providers

Your opinion is important to us!

Thank you!
