Quick facts

 Company:	Stadt Wien
 Sector:	Regions & Cities
 Product / service:	Application
 Type of data:	Geospatial and Government data
 Origin:	Austria

Description

Cooles Wien is an application developed by the city of Vienna that provides a useful solution for urban heat islands. While temperatures are increasing annually across the globe, urban areas are particularly affected by a warming climate. Cooles Wien combines data from the city of Vienna with geospatial data to help citizens find places for cooling and refreshments, such as drinking fountains, spray showers, pools, lakes, and water playgrounds.

Benefits

Cooles Wien is a useful tool for citizens to escape the urban heat islands that are becoming ever more present as the climate continues to heat up.

How open data is used

Cooles Wien combines various datasets from the City of Vienna on drinking fountain locations, park facilities, monumental fountain locations, swimming pools locations, bathing locations, and playgrounds locations. These datasets are made available under a Creative Commons 4.0 Attribute License.
