Quick facts

 Company:	Ministry of Health in Austria
 Sector:	Public sector
 Product / service:	Website
 Type of data:	Health data
 Origin:	Austria

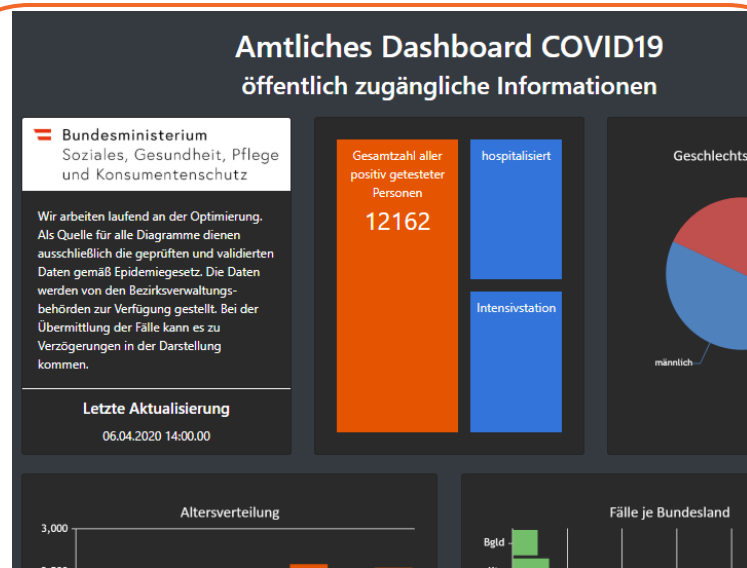

Description

In Austria, the Ministry of Health's dashboard makes current figures on the development of COVID-19 in Austria available to the public. The displayed figure (on the right) indicates the total number of positively tested people registered. This sum includes the recovered and deceased people due to COVID-19.

Benefits

- Improved government decision-making with knowledge gained from data.
- Objective research that is published can hold governments accountable for outcomes.
- Knowledge sharing on COVID-19 with researchers and the public.

How open data is used

The available underlying database of the dashboard is the epidemiological reporting system "Epidemiologisches Meldesystem" (EMS). The positive tests are registered in this database by the investigating laboratories and are validated by the health authorities in the district administration authorities. During the COVID-19 crisis, extracts from this database are being published on the dashboard.
