

URL <https://www.databio.eu/>**Quick facts**

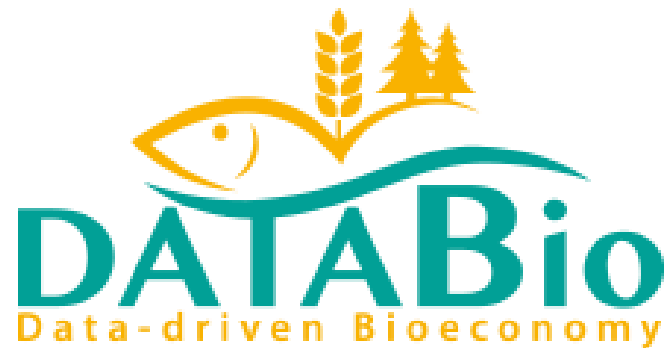

-  Company: DataBio
-  Sector: Agriculture, Fisheries, Forestry and Food
-  Product / service: Platform
-  Type of data: Agriculture, Forestry and Fishery data
-  Origin: Belgium

**Description**

The data-driven Bioeconomy project (DataBio) is an initiative that focuses on the production of best possible raw materials from agriculture, forestry and fishery for the bioeconomy industry to produce food, energy and biomaterials whilst taking into account responsibility and sustainability.

Benefits

-  DataBio supports the bioeconomy industry by using data to increase their market share whilst, for example, improving their data management services, helping sea resources management, increasing fishing value and improving forest health.

**How open data is used**

-  DataBio uses innovative Information and Communications Technology (ICT) and information flows that centre around the use of proximal and remote sensors to provide a streamlined data infrastructure for data discovery, retrieval, processing and visualisation to support decision-making in bio-economy business operations.
