Quick facts

-  Company: FSTR
-  Sector: Transport
-  Product / service: Application
-  Type of data: Open application data
-  Origin: Belgium

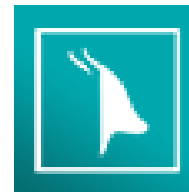

Benefits

-  By integrating data from several carpooling applications FSTR increases flexibility and reach of users who want to carpool.
-  By making carpooling more attractive the company aims to reduce traffic in Belgium by 20%.

How open data is used

-  Data is scraped from other carpooling apps and integrated into the app of FSTR. By doing this FSTR grows their database and the flexibility of carpool application users.

Description

-  FSTR is a carpool application that combines information of all carpooling apps in the market to provide consumers with more flexibility and options to choose from. They use this flexibility to encourage companies to join in the carpooling initiative and reduce traffic in the region of Gent in Belgium.
