Quick facts

-  Company: Kaiterra
-  Sector: Environment & Health
-  Product / service: Application & Company
-  Type of data: Air quality data
-  Origin: China

Benefits

-  The application is linked to a 'Laser Egg' - a smart air quality monitor that detects particulate pollution and allows users to track air quality according to US EPA, China and India national Air Quality Indexes.
-  Users can monitor indoor and outdoor air quality by the minute, be alerted to changes in air quality and view the air quality in over 50 countries. 

How open data is used

-  The application collects and stores air quality data by the minute, hour or day from linked Laser Eggs.
-  Users can also view air quality measurements from official monitoring stations in over 50 countries across the globe. 

Description

-  Kaiterra is a company based in China that aims to increase awareness on air pollution. The company creates high-accuracy air quality monitors for consumers, businesses and industrial use and for private individuals to track air quality, such as the Laser Egg.
