Quick facts

- Company: OnDijon
- Sector: Population & Society
- Product / service: Application
- Type of data: Public services' data
- Origin: France

Description

OnDijon aims to optimise and collect urban equipment in France to facilitate the management of public space, such as traffic lights, lighting, and cameras. To do this, OnDijon asks citizens to report problems or manage requests in the metropolis from their smartphone.

Benefits

The centralised management of the public space and the equipment makes it possible to quickly implement new services for all citizens. For example:

- Achieving substantial savings in energy consumption.
- Improving the security of the public space and developing better coordination in the event of crisis management.
- Promoting a greater transversality between different services.

How open data is used

Through the available data from public services to local digital business, Dijon Métropole is setting up local data governance by being both a facilitator of data openness, offering new services to its citizens, and guaranteeing their proper use. It collects data from citizens and uses the information to provide this centralised management of the public space.
