Quick facts

 Company:	Global Farm Platform
 Sector:	Environment and Agriculture, Fisheries, Forestry & Food
 Product / service:	Website
 Type of data:	Environmental data
 Origin:	Global

Benefits

-  FARM aims to optimise the value chain by providing information on grazing livestock production systems.
-  The website brings together farmers and researchers via a data driven platform.

How open data is used

-  The platform consists of a network of individual model farms, or 'farm platforms', shown on an interactive map for users to see where farms are located, who their partners are and what the focus of the farm is.

Towards Sustainable Ruminant Production

Description

-  The FARM platform aims to optimise the value chain and bring different groups together as an ecosystem around a data driven platform. In addition, they want to promote farm research platforms that contribute to food security, sustainability and poverty alleviation.
