Quick facts

- Company: City of Vienna
- Sector: Environment
- Product / service: Website
- Type of data: Public data
- Origin: Global

Description

OpenTrees.org combines urban tree datasets from over 150 cities across the globe, and is the largest database of municipal street and park trees. The data is provided by local governments and helps them guide choices of what to plant next, manage risk of branches falling, and manage pruning, watering and inspection schedules.

Benefits

OpenTrees.org provides users with a wealth of information, such as botanical group, family, rarity, species, trunk size, health, maturity, and presence of edible fruits.

How open data is used

OpenTrees.org collects tree data published as open data by local governments and makes use of OpenStreetMap to visualise the data.
