Quick facts

- Company: Chloe Irrigation Systems
- Sector: Agriculture, Fisheries, Forestry & Foods
- Product / service: Platform
- Type of data: Agricultural and weather data
- Origin: Greece

Description

Chloe Irrigation Systems is an AI-powered platform that offers personalised and optimised irrigation scheduling. The aim is to create a better future with less water waste and increased crop yield.

Benefits

- Personalised solutions – solutions range from small gardens to specialised greenhouse applications.

- Minimising water waste – Chloe uses forecast as well as field data to provide users with the best schedule to minimise water usage.

- Better plant health – ensuring optimal conditions for plant growth and increased crop yield by optimising irrigation.

How open data is used

Chloe irrigation systems uses both agricultural data, such as field's soil and crop types, and weather conditions to optimise irrigations and reduce water and costs.
