Ocean Energy Portal

Website

URL   **https://oceanenergyireland.com/**

Quick facts

- Company: Ocean Energy Portal
- Sector: Energy
- Product / service: Website
- Type of data: Energy and geospatial data
- Origin: Ireland

Description

The Ocean Energy Portal aims to contribute to green economy goals by offering information on the sustainable development of offshore renewable energy resources. The website encourages the increase of indigenous production of renewables so that the supply of energy can be secured for future generations. The available information touches on one of six domains, being: marine data, maps, tools, funding, energy site assessment, management and development.

Benefits

The website offers relevant, accurate and up-to-date information on marine renewable energy development and inspires ocean energy developers to engage with each other.

How open data is used

The Ocean Energy Portal collects its data through the Sustainable Energy Authority of Ireland (SEAI), the Irish Marine Institute, and through measuring devices at several test institutes across the shores. These data are then made available on the portal for anyone to access.
