Quick facts

- Company: EconCartography
- Sector: Economy & Finance
- Product / service: Platform & Application
- Type of data: Economic data of trade competitiveness
- Origin: Italy

Description

EconCartography creates network-based maps of European economies to identify growth opportunities and promote EU inclusiveness and cohesion.

Benefits

- Data aggregator – Data mining process to generate easy-understandable reports. This enables users to get access to data without having any specialist expertise.
- Network science analytics – Possibility to explore, expand and disseminate knowledge, such as analysing the impact of global trade on single countries.
- Interactive discovery – EconCartography enables users to create customised visualisations.

How open data is used

By putting together Eurostat and Comtrade, EconCartography offers the possibility of exploring a massive dataset rich with details on international trade and national macroeconomic indicators.
