Quick facts

- Company: Go Sharing
- Sector: Transport
- Product / service: Website & Application
- Type of data: Geodata
- Origin: The Netherlands

Description

Go Sharing is a transportation company that supplies e-scooters, that can be rented and paid for by users with a mobile application. The system uses geo open data to connect users with nearby e-scooters in the cities of Rotterdam, Eindhoven and Helmond. The service also provides users with a map.

Benefits

- The use of e-transportation potentially reduces pollution in cities and reduces the traffic congestion from cars.
- The e-scooters can be used on existing infrastructure in the cities, such as bicycle paths.
- The e-scooters are relatively affordable for young people.

How open data is used

Geo open data is used to connect people with available e-scooters through the application. Geo open data offers maps of the surrounding area and widely used transportation routes in the city. In this manner, GO Sharing can make sure their e-scooters are available in all highly used transportation routes.
