**Description**

The ePaństwo Foundation provides support to cities, communities, counties and public institutions that want to make their data publicly available for citizens. They are, for example, engaged in supporting smart cities.

**Benefits**

The foundation believes that data should help solve problems and that open data is there to facilitate the functioning of cities.

# Fundacja ePaństwo

**How open data is used**

The ePaństwo Foundation moves a huge part of public open data from the “deep web” and makes them visible and accessible in new ways by using modern web techniques. The collected public open data is from national registries, such as the National Business Registry, Supreme Audit Office, Public procurements databases, Scientific databases, Patents databases and the National Electoral Commission.
