Golemio
Website

URL	https://smartprague.eu/projects/golemio-data-platform/

Quick facts

- Company: Operátor ICT
- Sector: Region & Cities
- Product / service: Website
- Type of data: Municipal data
- Origin: Czech Republic

Benefits

- Golemio provides data on different aspects of Prague, such as the pollution levels, modes of transportation, street lights, Wi-Fi locations and USB charging points.
- The website serves as a platform for people to find datasets that they can analyse and process to gain additional insights.

How open data is used

- Open data is collected from the municipality of the Capital City of Prague and is used to provide information and map visualisations about different aspects of the city.
- Experts are encouraged to re-use data on the platform to create websites, applications or prediction models for the city.

Description

- Golemio is the data platform for Prague Capital City and aims to promote the re-usability of data to find more smart solutions. The platform serves as a single information point where data about the city can be found and analysed.
