Quick facts

- Company: iMar
- Sector: Environment
- Product / service: Application
- Type of data: Weather data
- Origin: Spain

Benefits

- Users receive both real-time information as well as predictions on sea conditions and can thus plan their sea trip in a safe manner.

How Open Data is used

- Measurement systems and models managed by the state ports publish their information as Open Data, which is then integrated in this application together with wind forecasts provided by Spain's Meteorological Agency.

Future plans

- Users ask for more detailed maps and additional information on the sea, offering new opportunities to further improve the application.
