Description

JIG is a business group that provides advanced services around Information Centre Technology. This is divided into three business areas, which are perfectly integrated with one another: Service Management, Internet and Mobile. JIG develops software applications in various fields, including smart cities, big data, Fiware-based IoT systems for industry and transport, access control systems, and incident management platforms.

Benefits

JIG enables the ability of companies and public institutions to be more competitive, efficient, and flexbile to adapt to changes.

How open data is used

JIG uses private and public data from several sources. Specifically, they use public and private open data APIs, Fiware data integrations and RSS feeds.
