Quick facts

- Company: MeteoSwiss
- Sector: Environment
- Product / service: Visualisation
- Type of data: Meteorological data
- Origin: Switzerland

Description

MeteoStats is a product of the Swiss Federal Office of Meteorology and Climatology and contains data from as early as 1880 onwards. An example of a MeteoStats initiative is MeteoSwiss, a service that provides visualisation of various types of weather and climate data. The website shows historical trends for measures like temperature and the various types of precipitation.

Benefits

The website makes it possible for users to track developments in a specific region of Switzerland and across the country, and to select varying time periods. The website contains a heatmap, and two different trend graphs, in which datapoints are be clearly and concisely visualised, making it easy to digest for the user.

How open data is used

The data is obtained from the Swiss Federal Office of Meteorology and Climatology, such as MeteoSwiss. This information is public and free to use by anyone.
