Quick facts

-  Company: M23 Solutions GmbH
-  Sector: Transport
-  Product / service: Website & Application
-  Type of data: Swiss public transport providers data
-  Origin: Switzerland

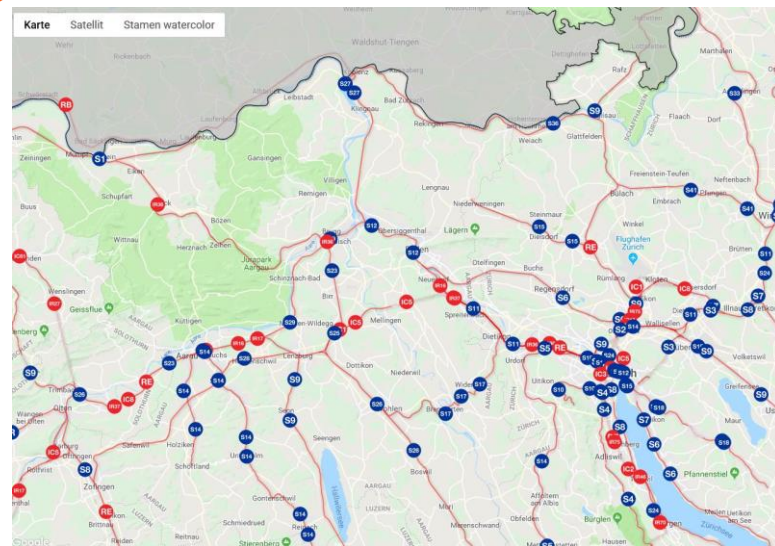

Description

This real-time website shows all running trains in the Swiss Federal Railways Network, which is one of the densest and most punctual across the globe. A map is provided where all positions of trains are marked. For each train, details are provided such as train number, current speed, and train stops on its route. For each Swiss train station, the user can display upcoming departures. Lastly, the website enables a fast-forwarding mode. Therefore, users can see the development of anticipated traffic.

Benefits

The tool allows travelers to make smart decisions as users can look at the predicted travel in the future and therefore, get an overview of the anticipated traffic.

How open data is used

For this website, open data from the Swiss Federal Railways network and fahrplanfelder.ch is used. The data enables the user to see a dynamic overview and updates of the rail network in Switzerland.
