Quick facts

- Company: Niels van Hove
- Sector: Population & Society
- Product / service: Platform
- Type of data: Open national statistical data
- Origin: The Netherlands

Description

This application supports parents-to-be with their search for baby names. Users see lists of first names (separate for female or male) that they can mark and save in an additional favourite list. In addition, users can share names and lists with others. The application is available for eleven countries using respective national sources of data.

Benefits

The application aids in the name search for parents-to-be in a simple, playful, and user-friendly way.
