### Quick facts

 Company:	Informatiehuis Marien
 Sector:	Environment
 Product / service:	Website
 Type of data:	Data of the main water system
 Origin:	The Netherlands

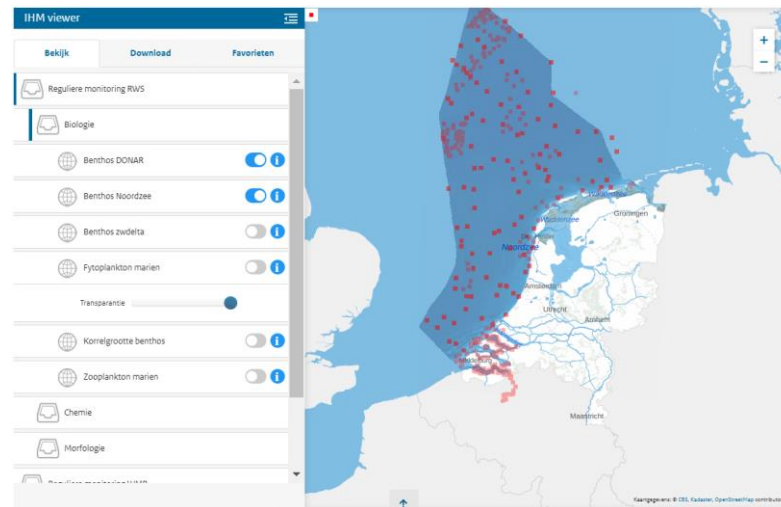

### Description

Informatiehuis Marien offers a global overview of the chemical and biological monitoring networks that is being carried out in the North Sea and Wadden Sea. It contains information about the measurement locations (such as position, route, area); the monitoring networks that are active; and references places where the relevant information about the monitoring network is located.

### Benefits

Transparency – The website enables user to see how the Netherlands complies with the obligation to monitor environmental status in its own part of the North Sea.

### How open data is used

Informatiehuis Marien transfers data on monitoring activities, such as monitoring networks, biological or chemical information, into understandable maps.
