Quick facts

-  Company: Protected Urban Planet
-  Sector: Environment
-  Product / service: Website
-  Type of data: Data on protected urban areas
-  Origin: Netherlands

Description

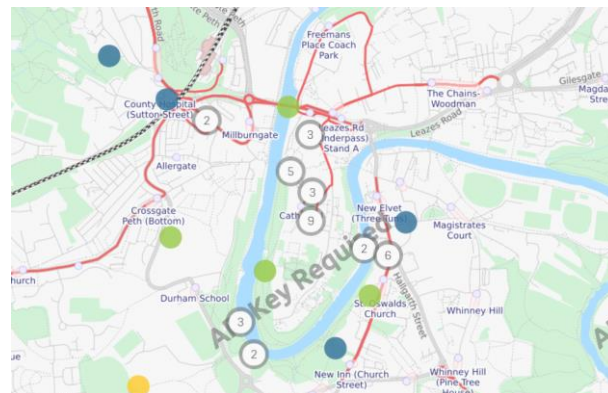

Protected Urban Planet is a tool developed to enable protected urban areas worldwide to be watched by experts and non-experts. The aim is to bring global, national, and local contributions to heritage management together and thus, improve sustainability.

Benefits

-  Protected Urban Planet enables everyone to participate in the protection of cultural heritage.
-  By collecting data about protected urban areas, their values, their threats, and how they are managed, the website can increase awareness about why that area is protected and how users can continue protecting it.

Protected Urban Planet

How open data is used

In Protected Urban Planet, data such as spatial data, descriptions, visual, audio and sensory data from various sources expressing cultural significance and value are collected and analysed. Everyone can upload data, verify, analyse, and access it.
