## Quick facts

 Company:	The Climate Corporation
 Sector:	Environment
 Product / service:	Platform
 Type of data:	Meteorological and geospatial data
 Origin:	United States

## Description

The Climate Corporation offers operating and financial software and services that boost the profitability of farmer's yields. The corporation functions as a digital farming platform that combines local weather monitoring with agronomic models and weather simulations.

## Benefits

The tools offered by Climate Corporation make it possible to:

- Monitor field health through imagery;
- Analyse crop performance;
- Optimise seed investment; and
- Manage fertility whilst taking into account the variability across farms, such as customised fertility and seeding plans.

# THE CLIMATE CORPORATION

## How open data is used

The corporation obtains its data from the National Weather Service, National Aeronautics and Space Administration (NASA) and the U.S. Geological Survey.
