Quick facts

 Company:	Lime
 Sector:	Transport
 Product / service:	Website & Application
 Type of data:	Geodata
 Origin:	United States

Description

Lime is a transportation company and was founded in California. The service now mainly operates across the United States and Europe. Lime supplies e-steps that can be rented and paid for by users with a mobile application. The system uses geo open data to connect users with nearby e-steps. Lime has also set up corporate partner programs, where companies can provide e-steps to their employees for free or with a discount. Lime offers all users a discount on helmets to enhance safety.

Benefits

More e-vehicle usage potentially reduces the pollution levels and traffic congestion in cities and provides affordable transportation.

How open data is used

Geo open data is used to connect people with available e-steps through the application. Geodata offers maps of the surrounding area and widely used transportation routes in cities in the United States and Europe. In this manner, Lime can make sure their e-steps are available in all highly used transportation routes.
