## Quick facts

-  Company: Transport for London
-  Sector: Transport
-  Product / service: Website
-  Type of data: Transit and mapping data
-  Origin: United Kingdom

## Description

The world's largest database of bicycle infrastructure that provides information about finding places to park or protected cycle lanes, and pictures of cycling infrastructure to see what can be found on-street and where.

## Benefits

-  Overview of the infrastructure – Transport for London will make it easier for Londoners to plan cycle journeys using their apps.
-  Enormous database – The website enables users to see exactly what can be found on-street and where.

## How open data is used

The underlying data of Transport for London is created by surveying every street in London. It contains data on all 146,000 bicycle parking spaces; 2,000 kilometres of cycle lanes and over 480,000 photographs of cycling infrastructure.
