|  Company: | U.S. Department of Energy |
|  Sector: | Transport & Energy |
|  Product / service: | Website & Application |
|  Type of data: | Data on fueling stations |
|  Origin: | United States of America |

Description

Using the current location or entering a custom location, with Alternative Fueling Station Locator the customer can find the 20 closest stations that offer electricity, natural gas, biodiesel, or hydrogen, for example. Also further information, such as availability, is provided.

Benefits

-  With the Alternative Fueling Station Locator drivers can find the closest fueling station and thus, save time.
-  The use of alternative resources for driving is simplified and thus promoted.

How open data is used

-  The Alternative Fueling Station Locator draws information from the U.S. Department of Energy's Alternative Fuels Data Center. With location data on about more than 15,000 alternative fueling stations, the service holds the most comprehensive and updated database of alternative fueling stations in the United States.
-  This data is visualised on a map then.
