Quick facts

-  Company: Enigma Technologies, Inc.
-  Sector: Economy & Finance
-  Product / service: Platform
-  Type of data: Organised and structured public data
-  Origin: United States of America

Description

Enigma is a platform that provides big public data about companies, people, and locations that is centralised and structured content wise. In this, everyone has the opportunity to access and connect the public data and to re-use it.

Benefits

-  Clients are empowered to increase revenue and drive cost-savings through the use of the public data.
-  Public data, that would otherwise be disparate and unorganised, is accessible for everyone free of charge.

How open data is used

By centralising, mining and relating big public data from diverse sources such as government spending contracts, liens, patents, bills of lading, etc., Enigma provides users with sorted data for further usage.
