Quick facts

-  Company: Global Health Security Index
-  Sector: Health
-  Product / service: Website
-  Type of data: Health data
-  Origin: USA

Description

In October 2019, the Global Health Security (GHS) Index was established. The index is a comprehensive assessment of the preparation for epidemics and pandemics for 195 countries. The GHS Index is a project of the Nuclear Threat Initiative and the Johns Hopkins Center for Health Security and was developed with the Economist Intelligence Unit. They created a framework, organised across 6 categories, 34 indicators and 85 sub-indicators to assess a country's capability to prevent and mitigate epidemics and pandemics.

Benefits

The GHS Index seeks to illuminate preparedness and capacity gaps to increase both political will and financing to fill them at the national and international levels.

How open data is used

The GHS Index relies entirely on open-source information: data that a country has published on its own or has reported to or been reported by an international entity.
