Quick facts

-  Company: FSTR
-  Sector: Transport
-  Product / service: Application
-  Type of data: Geospatial
-  Origin: Belgium

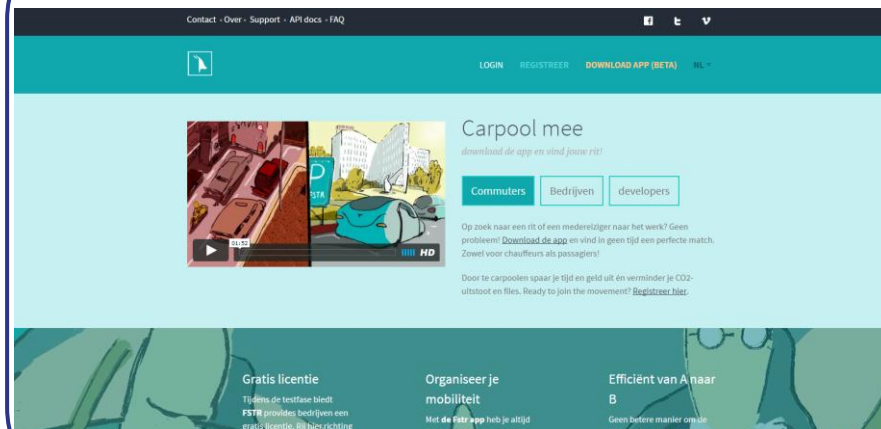

Benefits

-  FSTR offers an application bringing together travellers with the same destination to facilitate carpooling.

How Open Data is used

-  In addition to bringing together riders and passengers, fstr also provides high performance mobility data through a live Open Data API stream. It also makes it possible for HR departments to integrate the data of fstr to match colleagues for potential ridesharing.

Other information

-  The innovative element of fstr compared to other ridesharing applications is that it not only makes use of its own database of rides and drives, but brings together all possible rides into one Open Database.
