### Quick facts

-  Company: HusetsWeb
-  Sector: Energy & Utilities
-  Product / service: Service
-  Type of data: Energy consumption
-  Origin: Denmark

### Benefits

-  It provides intelligent and dynamic calculations of energy saving measures that can help individual homeowners save energy and money.

### How Open Data is used

-  The calculator uses information about Danish building architecture, 200 years of building statistics and information about heating systems.
-  This information is combined with data on the specific property which is drawn from public databases. In addition, the homeowner can add his own data about the property and actual energy consumption.

### Context

-  HusetsWeb is an IT company that sells system solutions related to energy and housing improvements in the form of an Energy Report to the homeowner
-  It offers homeowners a place where all the information about the house is assembled. Energy Report, approvals from the municipality, historic photos, sketches of pipes, etc.
