Quick facts

- Company: MARKUS
- Sector: Other
- Product / service: Website
- Type of data: Public sector
- Origin: Estonia

Benefits

- MARKUS has developed an automated age verification tool. The tool can be deployed both in physical stores (e.g. self service counters) or for online stores to verify the age of the customers.
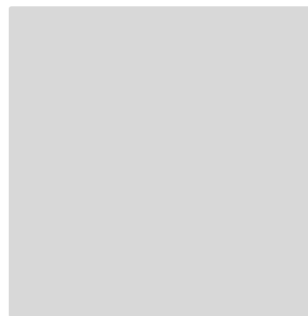

How Open Data is used

- The application makes use of Open Data to control the identification card of the customer and uses Big Data for the (further) development of the facial recognition software to make accurate photo analysis possible.
