Quick facts

-  Company: Eoxplore and Terranea
-  Sector: Public
-  Product / service: Service
-  Type of data: Geological
-  Origin: Europe

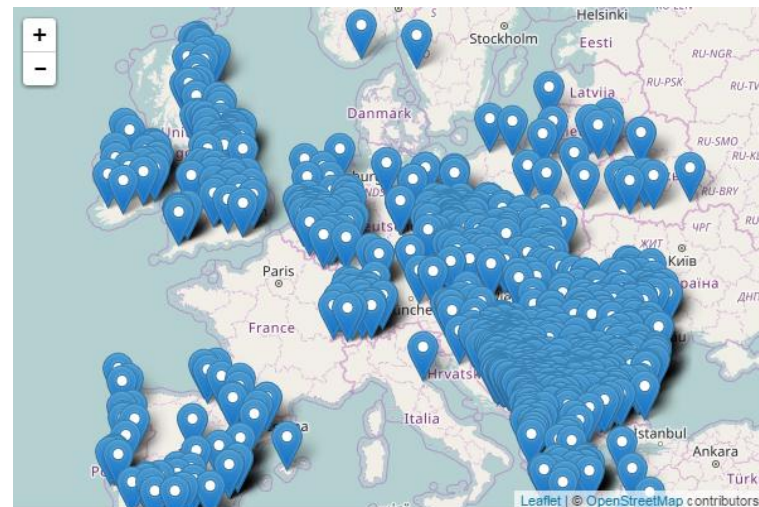

Benefits

-  Users of the database understand flood related risks better and can identify the hazards of these risks.
-  Improve awareness of flood related risks.

How Open Data is used

-  The European Historical Flood Disaster Database will bring together consistent and accurate geospatial information relating to flood events that affect the population from across the continent.

Context

-  This Open Data, together with the services and infrastructure that make it accessible online are the catalysts for this service. Data and accessibility costs were far too great in the past to be able to build such a service. Furthermore, licensing issues related to remotely sensed imagery in many cases made it almost impossible to create such a downstream service.
