Quick facts

- Company: Kannattaako kauppa
- Sector: Real Estate
- Product / service: Service
- Type of data: Multiple domains
- Origin: Finland

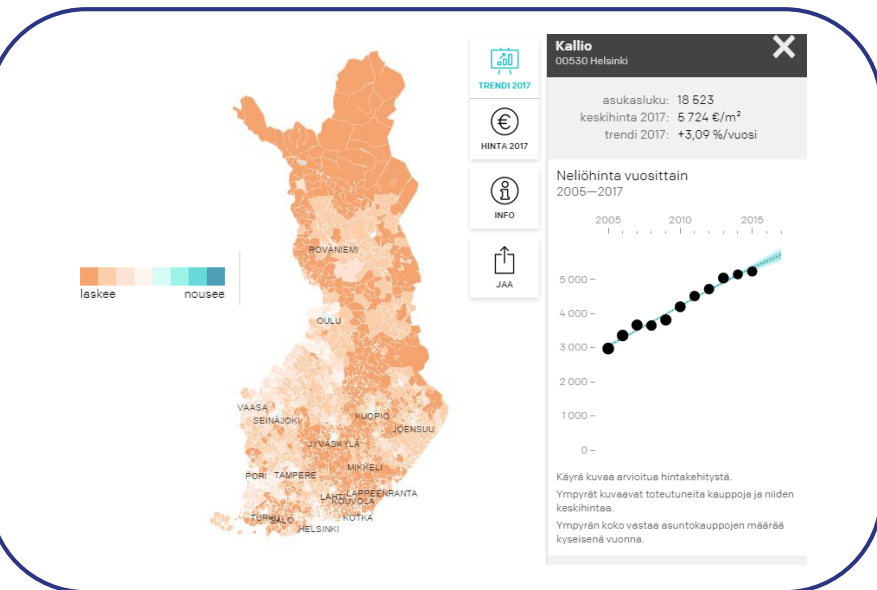

Benefits

- Insights on the price development of real estate in the future.
- Makes it easy to compare houses/neighborhoods by price and population.

How Open Data is used

- Open Data is used to model Finnish apartment prices and their trends on postal code level in the years 2005-2014.
- Price trends have been predicted for 2016-2017 using advanced statistical modeling.
- The estimates from the model are available as an interactive visualisation.

Other information

- The entire model behind the calculations, including justifications on the used indicators, are available on [GitHub](#)
