Quick facts

- Company: Maptionnaire
- Sector: Regions & Cities
- Product / service: Company
- Type of data: Geospatial data
- Origin: Finland

## Benefits

- This tool allows users to easily develop a map-based survey, through which they can collect data, analyse results and visualise results.

How Open Data is used

- The map-based survey makes use of open location-based data. Furthermore, it can make use of other types of Open Data, e.g. public transport data in case of crowdsourcing feedback on public transport routes.

Other information

- Maptionnaire is made available as Software as a Service (SaaS);
- Maptionnaire can serve as a tool to include citizens in the decision making process.
