Quick facts

- Company: PTV Group
- Sector: Transportation
- Product / service: Product
- Type of data: Transport
- Origin: Germany

Benefits

- Allow customers who are transporting goods to plan and optimise their transportation routes, trips and distribution structures.
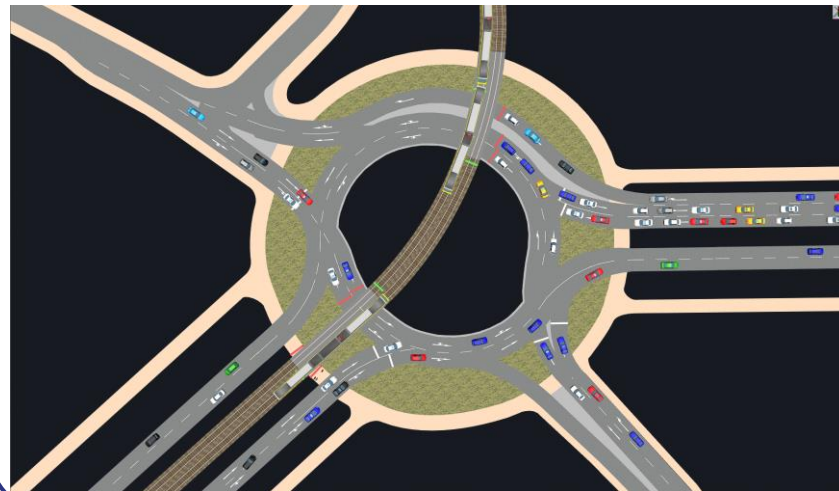

How Open Data is used

- Using data on traffic infrastructure, traffic use and other data that could be relevant for traffic, mobility and statistical structural data.
- The company offers software, data, content, consulting and research by using Open Data for their software products.

Simulation of partially signalised roundabout with spiral marking and tram prioritisation.

Future plans

- In order to improve their products, PTV Group would be interested in small-scale structural data (more granular than municipal data), statistics on numbers of users of public transport as well as visitor numbers of public facilities, etc.
