Quick facts

-  Company: MOVIDA
-  Sector: Agriculture, Fisheries, Forestry & Foods
-  Product / service: Service
-  Type of data: Various, e.g. weather
-  Origin: Italy

Benefits

-  This is an integrated tool, based on FIWARE technology, Open Data and specific data regarding vineyard characteristics, to support farmers and technicians in the design, simulation and monitoring of a given vineyard.

How Open Data is used

-  The MOVIDA concept has been developed to achieve robust and economically viable vineyard design, predicting realistic vineyard performances. At the same time, it optimises vineyard performances through modelling and proper use of available selected open data.

Other information

-  The tool supports strategic choices (type of grape to be used, selling price, type of wine produced), and the required operations to achieve a given target of quality and quantity of produced wine.
