Quick facts

- Company: Waag society
- Sector: All domains
- Product / service: Service
- Type of data: All domains
- Origin: Netherlands

Benefits

- Provide insights into what is currently happening in Amsterdam, for example average speed of traffic, events going on and noise levels.

How Open Data is used

- Dashboards and other visualisations are made from information on the city of Amsterdam in a wide range of municipal services.
- The dashboard contains data in the following categories: transport, environment, statistics, economy, community, culture, and security.
- The information is captured in charts, graphs, and on a map of the city. On the map, you can choose which layers you would like to see.

Next steps

- Currently the real time dashboard is under construction.
- Due to the technology behind it, the city dashboard is easily transferred to other cities.
