## Quick facts

-  Company: City of Gdansk
-  Sector: Transport
-  Product / service: Product
-  Type of data: Road monitoring
-  Origin: Finland

## Benefits

-  The city of Gdansk has installed a number of monitors which count and display the number of bicyclists passing by. By visually showing the number of bicyclists the project is part of a bicycle promotion campaign.

## How Open Data is used

-  The location of the bicycle counters are shared on the [OpenCycleMap](#), a derivation of Open Street Map

## Other information

-  The monitoring of bicyclists not only helps in the promotion of using bicycles, it also provides information for urban planners in terms of where cycling can be better integrated in the city.
-  The monitors are part of the European project abc.Multimodal which aims to raise the importance of bicycles as means of transport
