Benefits

- Web application that uses technology and journalism to facilitate the access to public information.
- It increases public awareness about transparency and open public data.

How Open Data is used

This is a tool that collects and analyses the information of public administrations in real time to promote the transparency of the institutions.
It gets information from public sector webs and from information requests.
Civio creates its own tools to extract and manage information that is difficult to process, such as onodo.org

Future plans

The future is to improve public management and citizen participation through raising awareness at national and international level. It aims to grow and self-finance by individual donors, service delivery and EU grant agreements in data journalism among other RIA topics.

Civio wants to increase its participation in international projects and export its ideas and products to EU and Latin America.

It plan opens new business opportunities for city councils.
