Quick facts

- Company: Meteogrid
- Sector: Meteorological Sector
- Product / service: Online Weather Service
- Type of data: Geographic data, Weather data, Environment
- Origin: Spain

Benefits

- Web application that collects data from AEMET (State Meteorological Agency, *Agencia Estatal de Meteorología* in Spanish) to provide real-time information about the weather that will be in a specific place.
- This information can be used by the different responsible organizations for preventing and decrease the risks and dangers caused by the weather.

How Open Data is used

- Meteogrid collects data from AEMET and others (including private sources) to predict any kinds of weather events as well as where this could happen.
- The information obtained needs to be interrelated and provided with interoperability for new indicators development.
- These indicators are created from the enrichment of distinct sources data. Furthermore, they can be shown on colored maps for their easier visualization.

Future plans

- The future is to continue to provide the information to help firefighters and civil protection reduce risks and visualize changes in weather phenomena.
- The company is participating in European consortia and planning new services to offer to the market. Therefore, it is a company in expansion.
