- Open Pesticide Finder is a support tool for agricultural companies and individual farmers, who are looking for the most suitable pesticides for their crops.

pestifinder

How Open Data is used

- This app centralises all the information coming from open datasets provided by official national and European organisations and enriches it with open geographic information.

Other information

- The app gives the possibility to use different research criteria, such as the country of growing, the country of selling and the type of vegetables. Two versions are available: one for free and providing basic info, and a paid version providing more information and services such as alerts and recommendations about new products.
